

Testimonial of Calnetix Technologies, LLC

Calnetix Technologies, LLC (“Calnetix,”) headquartered in Cerritos, CA, is a technology company specializing in the development and manufacturing of energy-efficient, high-speed motor generators and best-in-class advanced magnetic bearing systems. We have a global presence with a significant share of our business reliant on export markets.

Calnetix has worked with GBC International Bank for nearly 10 years. GBC’s continued support of our business has enabled us to reach markets that we might not otherwise have entered. With strategic financing offered through GBC’s various lending programs, we have been able to expand our manufacturing capabilities and purchase our new corporate headquarters building in the heart of the southern California business district. Also, GBC’s Ex-Im Bank credit line is a very valuable source of financing for our export business. We are able to leverage use of the line to grow our business and stay on top of our cash flow needs.

Working with GBC International Bank has been a pleasant and rewarding experience for Calnetix and our business relationship has grown immensely over the years.

Thank you to the entire GBC team for your continued support. We look forward to another excellent 10 years!
